

v0.31 Word Export Audit

2026-05-22

Purpose

This audit records the Word-preview export for the v0.31 manuscript:

`v0_31_layout_check_cleanup.docx`

The export is a submission-package preview derived from the v0.31 $\text{\LaTeX}$ manuscript and bibliography output. It does not change the dialogue-state v3 main experiment, does not recompute any result table, does not add a main condition, does not modify online AIChat, and does not add new Real-AIChat results.

Export Method

The DOCX was generated from:

- v0.31 manuscript $\text{\LaTeX}$ source
- v0.31 manuscript .bb1 bibliography output

The export replaces raw citation keys with author-year labels, includes a References section, and converts the manuscript tables into Word tables for reviewer-facing inspection. The $\text{\LaTeX}$ file remains the source of record for final PDF compilation.

Structural Checks

check	result
DOCX paragraphs	198
DOCX tables	12
References heading present	yes
Raw citation keys in extracted DOCX text	0
Restricted/private markers in extracted DOCX text	0
Unsafe claim-gate phrases in extracted DOCX text	0
Quick Look first-page thumbnail generated	yes

Rendering Limitation

The standard DOCX render workflow could not complete because LibreOffice/soffice is not installed in the current environment. The attempted renderer failed with:

FileNotFoundError: [Errno 2] No such file or directory: 'soffice'

As a fallback, macOS Quick Look successfully produced a first-page thumbnail, and text-level/structure-level checks were completed. Full Word/PDF visual inspection remains a human submission-package TODO, especially for the wide Appendix A tables.

Manual TODO Before Submission

- Open the DOCX in Word or LibreOffice and visually inspect page breaks, heading spacing, table widths, and Appendix A readability.
- Confirm whether the journal requires DOCX as the source file or whether the $\text{\LaTeX}$ source/PDF is sufficient.
- Fill author metadata, affiliation, corresponding author, declarations, and any journal-specific title-page fields.
- Complete final reference/BibTeX verification and institutional ethics/privacy/data-availability review.

Evidence Boundary

This export only affects manuscript packaging. It does not alter the original 50-case dialogue-state evidence package, the 31-case primary scaffold subset, the expanded v2 100-case closeout numbers, the 7 offline tutoring designs, or any online AIChat behavior.
