

v0.31 Layout Check Cleanup Audit

2026-05-22

1 Purpose

This audit records a layout-focused cleanup pass on top of v0.30. The goal was to improve the visual readability of the expanded v2 result tables and Appendix A without changing any experimental result, evidence class, or claim boundary.

2 Files Produced

- Main LaTeX manuscript draft: v0.31 layout check cleanup.
- Compiled PDF preview for the v0.31 manuscript.
- v0.31 keep-only reference file copied from v0.30.
- This v0.31 audit file and PDF preview.

3 Main Changes

- Increased the page-space guard before the expanded v2 paired-comparison table so the table starts on a clean page instead of splitting at the page bottom.
- Kept Appendix A's two cleaned transparency tables in one landscape environment so the second table can begin after the first table instead of being forced onto a mostly blank new page.
- Rendered selected PDF pages for visual inspection, including the expanded v2 result-table pages and Appendix A landscape pages.

4 Evidence Boundary

- Dialogue-state v3 main experiment changed: No.
- Dialogue-state v3 main tables recomputed: No.
- Main experiment condition added: No.
- Online AIChat, prompt, active mode, or student-visible response changed: No.
- New v2 experimental result generated: No.
- Any result number changed: No.
- Real-student case-level private material exposed: No.

5 Verification

- LaTeX compile status: passed for the v0.31 manuscript.
- LaTeX log check: no overfull boxes, unresolved references, or undefined citations detected in the final v0.31 manuscript log.
- Safety grep status: no unsafe sample-unit, deployment, comparator, learning-outcome, internal-variable, or unresolved-audit markers found in the v0.31 manuscript/audit pair.
- Privacy grep status: no private-source, raw-text, full-code, full-response, hash-salt, reversible-mapping, or private-path markers found in the v0.31 manuscript/audit pair.

6 Remaining Manual Checks

- Human visual check of the full PDF, especially all tables in Methods, Results, and Appendix A.
- Decide whether the expanded v2 closeout should remain in the main Results section or move to an appendix / companion evidence section.
- Produce a reliable Word version after journal-template conversion.
- Complete final reference, ethics/privacy, and data-availability review.
