

v0.30 V2 Integration Cleanup Audit

2026-05-22

1 Purpose

This audit records the v0.30 cleanup pass after the v0.29 benchmark/evaluation reframe. The goal was to make the 100-case / 700-response v2 closeout read as an integrated benchmark layer rather than as a late manuscript patch.

2 Files Produced

- Main LaTeX manuscript draft: v0.30 v2 integration cleanup.
- Compiled PDF preview for the v0.30 manuscript.
- v0.30 keep-only reference file copied from v0.29.
- This v0.30 audit file and PDF preview.

3 Main Changes

- Streamlined the abstract so that v2 is framed as a separate expanded closeout using the same offline tutoring designs.
- Rewrote the contribution paragraph from a protocol-contribution framing into four benchmark/evaluation contributions.
- Removed a duplicate evidence-hierarchy row so the v2 closeout appears once with a clear real-log-grounded aggregate boundary.
- Condensed the real-log-grounded v2 boundary section and removed repeated comparator wording.
- Shortened the discussion of real-student AIChat evidence so that it supports benchmark scalability without implying online deployment or learning-outcome evidence.
- Replaced the remaining “reasoning-bridge families” phrasing with a reader-facing limitation about learner-reasoning situations.

4 Evidence Boundary

- Dialogue-state v3 main experiment changed: No.
- Dialogue-state v3 main tables recomputed: No.
- Main experiment condition added: No.
- Online AIChat, prompt, active mode, or student-visible response changed: No.
- New v2 experimental result generated: No.
- V2 results merged into dialogue-state v3 primary tables: No.
- Bridge Contract / Repair written as a confirmed design advantage: No.
- DBox-inspired + Guard retained as the strongest v2 aggregate design: Yes.
- Student raw text, full code, full AIChat response, identity fields, hash salt, or reversible mappings exposed: No.

5 Verification

- LaTeX compile status: passed for the v0.30 manuscript and this audit.
- Safety grep status: no unsafe sample-unit, deployment, comparator, learning-outcome, internal-variable, or unresolved-audit markers found in the v0.30 manuscript/audit pair.
- Privacy grep status: no private-source, raw-text, full-code, full-response, hash-salt, reversible-mapping, or private-path markers found in the v0.30 manuscript/audit pair.

6 Remaining Manual Checks

- Decide whether the v2 closeout should remain in the main Results section or move to an appendix / companion evidence section.
- Complete a visual PDF check of the v2 result tables and Appendix A.
- Produce a reliable Word version after journal-template conversion.
- Complete final reference, ethics/privacy, and data-availability review.
